

For Immediate Release

MorehouseCowles Announces Placement of Large Scale Equipment for the Paint Industry

January 30, 2008, MorehouseCowles, a leading provider of dispersing, mixing and milling equipment, is pleased to announce a substantial sale of several 4,000 gallon paint industry let-down tanks with high flow agitators.

The equipment, utilizing a square tank configuration and high flow agitators, represents the state-of-the-art in let-down technology. MorehouseCowles promotes the use of square tanks with round corners for all let-down applications. This design has been scaled from lab units for fine-tuning formulas, to 20,000 gallon production tanks. In addition to this recent sale, MorehouseCowles has placed units with several paint manufacturers utilizing this technology in their let-down applications.

For all let-down applications, regardless of volume, square tanks with round corners with high flow agitators provide optimum performance and value. MorehouseCowles has the design and manufacturing knowledge and experience for let-down units to meet the needs of the paint industry at competitive prices.

For more information regarding this equipment, visit www.morehousecowles.com or call 1-800-625-4819.
