

# Safety mechanism for hi-shear impellers

## COWLES Impeller Guard

The COWLES impeller guard from MorehouseCowles, puts a focus on safety. The guard covers the COWLES hi-shear impeller allowing for safe and easy handling of the blade. It makes in-tank maintenance and cleaning much easier by eliminating the risk of cuts and prevents injury from accidental bumping of the exposed impeller. Changing impeller blades is now possible without handling sharp edges.

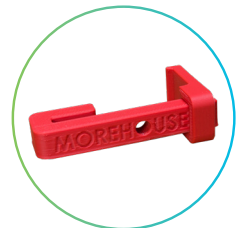

The light weight and easy-to-use design is adaptable, making it convenient to use for any impeller size. Simply add or subtract links to fit any diameter impeller. The guard is made of material that is resistant to many common chemicals for easy cleaning. Lock-out, tag-out hardware is also available for added safety.
